

APPENDIX I

DETAILED ABLATION STUDY

To measure the contribution of individual components, we evaluated four variants of our framework under identical datasets and protocols. Table V shows that removing either the Evaluator or Feedback Agent significantly degrades the *Final Pass Rate*. The steepest decline occurs when both are removed (21% vs. 52% for the full system), underscoring the necessity of the modular generate-evaluate-refine loop.

TABLE V
COMPONENT CONTRIBUTION ANALYSIS ACROSS ALL METRICS
(ABLATION).

Condition	Personalization Score (%)	Final Pass Rate (%)	Hard Constraint Pass Rate (%)	Commonsense Pass Rate (%)	Delivery Rate (%)
Full System	87	52	68	62	100
No Evaluator	79	30	45	49	91
No Feedback Agent	71	28	42	46	90
No Eval & Feedback	65	21	35	40	86
TravelPlanner Baseline	56	10	28	15	89
